PROFESSIONAL SUMMARY

Software Engineering student with hands-on experience in data engineering at a large-scale corporate environment (CNH Industrial). Built and maintained ETL pipelines, data models, and processing workflows using SQL, Spark, and Databricks. Proficient in Python for data automation and analysis, with a track record of delivering reliable, scalable data solutions. Seeking an internship or junior Data Engineer role to deepen expertise in distributed processing, data architecture, and governance.

WORK EXPERIENCE

CNH Industrial
Curitiba, Brazil

Data Engineering Intern
Mar 2024 – Aug 2025

- Built and maintained ETL pipelines for extracting, transforming, and loading large volumes of operational data in Databricks using SQL and Spark
- Designed data models for reporting solutions: schemas, table relationships, business rules, and data dictionaries
- Developed Python scripts for data flow automation, inconsistency treatment, and generation of analytical reports
- Processed and consolidated data from multiple sources to build analytical layers consumed by strategic KPI dashboards — reducing management analysis time by 30%
- Automated data routines with Power Automate and integrated systems via SharePoint and Power Apps, eliminating critical manual processes
- Documented pipelines, data models, and ingestion flows for traceability and maintainability of all delivered solutions

FixFacil Assistência Virtual
Curitiba, Brazil

Software Development Intern
Dec 2023 – Jun 2024

- Supported development and maintenance of backend systems at an early-stage technology startup
- Maintained and extended an inventory control system with database persistence and business logic updates
- Applied Generative AI tools to accelerate development cycles, troubleshoot issues, and optimize code

EDUCATION

UniSenai PR
Curitiba, Brazil

B.S. in Software Engineering
Mar 2023 – Expected Dec 2026

- Relevant Coursework: Software Architecture, Machine Learning, Data Analysis, Cloud Computing, Automation, Database Systems
- Published 2 academic articles on Digital Transformation and Software Quality Assurance
- Developed real-world software projects for external companies as part of coursework

TECHNICAL PROJECTS

3D Printer Management Dashboard
Jun 2025 – Dec 2025

- Real-time data ingestion pipeline using WebSockets and Node-RED to collect and process metrics from ESP32 sensors
- Anomaly detection logic on time-series data for automatic identification of offline equipment

- Web dashboard for real-time visualization of operational metrics and status indicators

Interactive Power BI Dashboards Jan 2024 – Jun 2024

- Data modeling and analytical layer construction for Financial, Production, and HR sectors
- DAX measures, hierarchy definitions, and business rule documentation for multidimensional analysis

Simoldes — Industrial Management System Jan 2025 – Jul 2025

- Data modeling and MongoDB integration: collections for machines, production programs, operation history, and authentication logs
- Node.js backend with RESTful APIs for ingestion, querying, and persistence of industrial operational data

TECHNICAL SKILLS

Data & Processing: SQL, Python, Spark, Databricks, ETL, Data Modeling, SQL Server
Visualization & BI: Power BI, DAX, Power Query, Advanced Excel
Automation: Power Automate, Power Apps, Node-RED, Excel Macros, Python scripting
Development: Node.js, TypeScript, JavaScript, MongoDB, REST APIs
Tools & DevOps: Git, GitHub, SharePoint, Postman, Vercel, Render

LANGUAGES

Portuguese: Native — C2
English: Fluent — B2/C1
Spanish: Basic — A2
